12. (Presently Amended): An electrophysiology device, comprising:

a) an elongated shaft having a proximal end, a distal end, and a distal shaft section having a proximal portion with a helical shape having one or more turns, and a noncoiled distal portion which extends distal to the proximal portion and which has no electrodes; and

b) ~~at least one electrode~~ a plurality of electrodes on an exterior portion of the ~~distal shaft section~~ proximal portion with the helical shape.

22. (Presently Amended): An electrophysiology device, comprising:

a) an elongated shaft having a proximal end, a distal end, and a distal shaft section having a proximal portion with a helical shape having at least one turn, and a distal portion ~~extending~~ which extends in a substantially straight configuration distally from the helical proximal portion and which has no electrodes; and

b) at least one electrode on ~~an exterior~~ the proximal portion of the distal shaft section.
